

Claims

1. A method of transmitting electronic messages in a computer environment, comprising the steps of:

5 receiving an electronic message addressed to a telephone number;
determining an instant message identifier associated with the telephone number;

determining whether an instant message receiver is available to receive messages addressed to the instant message identifier;

10 forwarding the electronic message as an instant message addressed to the instant message identifier in response to a determination that an instant message receiver is available to receive instant messages addressed to the instant message identifier; and

15 sending the electronic message to a mobile device at the telephone number in response to a determination that no instant message receiver is available to receive instant messages addressed to the instant message identifier.

2. The method of Claim 1, wherein the electronic message comprises any of:

20 a text message, an SMS text message, an MMS message, a video message, and an audio message.

3. The method of Claim 1, wherein the instant message is received at an electronic device configured to receive instant messages addressed to the instant message identifier.

25

4. The method of Claim 3, wherein the electronic device comprises any of: a computer, a personal data assistant (PDA), and a telephone receiver.

5. The method of Claim 1, wherein the determining the instant message identifier comprises searching for the instant message identifier associated with the telephone number in a database.

6. The method of Claim 1, further comprising the step of:
determining whether or not to forward the electronic message as an email message addressed to an email address according to a user preference stored in a database.

7. The method of Claim 1, further comprising the step of:
determining whether or not to forward the electronic message as an instant message addressed to the instant message identifier according to a user preference stored in a database.

8. The method of Claim 7, wherein the determining whether or not to forward is further based on source information of the electronic message.

9. The method of Claim 8, wherein the source information comprises any of:
a source address of the electronic message, a user name of a sender of the electronic message, a telephone number of a sender of the electronic message, and an instant message identifier of a sender of the electronic message.

10. The method of Claim 1, wherein the instant message is generated from the electronic message based on one or more predetermined rules.

11. The method of Claim 10, wherein the one or more predetermined rules select
5 one or more portions of the electronic message as the instant message.

12. The method of Claim 10, wherein the one or more predetermined rules selectively delete one or more portions of the electronic message to generate the instant message.

10

13. The method of claim 1, further including the step of forwarding the electronic message to a storage medium.

14. The method of claim 1, further including the step of storing the electronic
15 message in the storage medium.

15. The method of Claim 1, further comprising the step of:
determining whether or not to forward the electronic message to the storage medium according to the user preference stored in the database.

20

16. The method of Claim 1, further comprising the step of:
forwarding the electronic message to the storage medium when the forwarding to the mail address and the instant message identifier fails

17. The method of Claim 15, wherein the determining whether or not to forward is further based on source information of the electronic message.

18. The method of Claim 15, wherein the user preference stored in the database includes date and time preference of the instant message receiver.

5 19. The method of Claim 1, further includes the step of logging the forwarding the electronic message.

20. The method of Claim 1, further includes blocking the forwarding of the electronic messages based on a list of telephone numbers.

10

21. The method of Claim 1, wherein the forwarding is based on the one or more predetermined rules.

22. An apparatus for transmitting electronic messages in a computer
15 environment, comprising:

a module for receiving an electronic message addressed to a telephone number;

a module for determining an instant message identifier associated with the telephone number;

20 a module for determining whether an instant message receiver is available to receive messages addressed to the instant message identifier;

a module for forwarding the electronic message as an instant message addressed to the instant message identifier in response to a determination that an instant message receiver is available to receive instant messages addressed to the
25 instant message identifier; and

a module for sending the electronic message to a mobile device at the telephone number in response to a determination that no instant message receiver is available to receive instant messages addressed to the instant message identifier.

5 23. The apparatus of Claim 22, wherein the electronic message comprises any of:
a text message, an SMS text message, an MMS message, a video message,
and an audio message.

24. The apparatus of Claim 22, wherein the instant message is received at an
10 electronic device configured to receive instant messages addressed to the instant
message identifier.

25. The apparatus of Claim 24, wherein the electronic device comprises any of:
a computer, a personal data assistant (PDA), and a telephone receiver.

15

26. The apparatus of Claim 22, wherein the module for determining the instant
message identifier includes a module for searching for the instant message identifier
associated with the telephone number in a database.

20 27. The apparatus of Claim 22, further comprising:
a module for determining whether or not to forward the electronic message as
an email message addressed to an email address according to a user preference
stored in a database.

25 28. The apparatus of Claim 22, further comprising:

a module for determining whether or not to forward the electronic message as an instant message addressed to the instant message identifier according to a user preference stored in a database.

5 29. The apparatus of Claim 28, wherein the determining whether or not to forward is further based on source information of the electronic message.

30. The apparatus of Claim 29, wherein the source information comprises any of:
a source address of the electronic message, a user name of a sender of the
10 electronic message, a telephone number of a sender of the electronic message, and
an instant message identifier of a sender of the electronic message.

31. The apparatus of Claim 22, wherein the instant message is generated from the electronic message based on one or more predetermined rules.

15

32. The apparatus of Claim 31, wherein the one or more predetermined rules select one or more portions of the electronic message as the instant message.

33. The apparatus of Claim 31, wherein the one or more predetermined rules
20 selectively delete one or more portions of the electronic message to generate the
instant message.

34. The apparatus of claim 22, further including a module for storing the
electronic message in the storage medium.

25

35. The apparatus of Claim 22, further comprising a module for determining whether or not to forward the electronic message to the storage medium according to the user preference stored in the database.

5 36. The apparatus of Claim 22, further comprising a module for forwarding the electronic message to the storage medium when the forwarding to the mail address and the instant message identifier fails.

37. The apparatus of Claim 35, wherein the user preference stored in the
10 database includes date and time preference of the instant message receiver.

38. The apparatus of Claim 22, further includes a module for logging the forwarding the electronic message.

15 39. The apparatus of Claim 22, further includes a module for logging the forwarding the electronic message.

40. The apparatus of Claim 22, further includes a module for blocking the forwarding of the electronic messages based on a list of telephone numbers.

20

41. The apparatus of Claim 22, wherein the forwarding is based on the one or more predetermined rules.

42. A program storage medium readable by a computer, tangibly embodying a
25 program of instructions executable by the computer to perform a method of

transmitting electronic messages in a computer environment, the method comprising the steps of:

receiving an electronic message addressed to a telephone number;

determining an instant message identifier associated with the telephone

5 number;

determining whether an instant message receiver is available to receive messages addressed to the instant message identifier;

forwarding the electronic message as an instant message addressed to the instant message identifier in response to a determination that an instant message
10 receiver is available to receive instant messages addressed to the instant message identifier; and

sending the electronic message to a mobile device at the telephone number in response to a determination that no instant message receiver is available to receive instant messages addressed to the instant message identifier.

15

43. The medium of Claim 42, wherein the electronic message comprises any of:
a text message, an SMS text message, an MMS message, a video message,
and an audio message.

20 44. The medium of Claim 42, wherein the instant message is received at an electronic devices configured to receive instant messages addressed to the instant message identifier.

45. The medium of Claim 44, wherein the electronic device comprises any of:
25 a computer, a personal data assistant (PDA), and a telephone receiver.

46. The medium of Claim 42, wherein the determining the instant message identifier comprises searching for the instant message identifier associated with the telephone number in a database.

5 47. The medium of Claim 42, further comprising the step of:
determining whether or not to forward the electronic message as an email message addressed to an email address according to a user preference stored in a database.

10 48. The medium of Claim 42, further comprising the step of:
determining whether or not to forward the electronic message as an instant message addressed to the instant message identifier according to a user preference stored in a database.

15 49. The medium of Claim 48, wherein the determining whether or not to forward is further based on source information of the electronic message.

50. The medium of Claim 49, wherein the source information comprises any of:
a source address of the electronic message, a user name of a sender of the
20 electronic message, a telephone number of a sender of the electronic message, and
an instant message identifier of a sender of the electronic message.

51. The medium of Claim 42, wherein the instant message is generated from the electronic message based on one or more predetermined rules.

25

52. The medium of Claim 51, wherein the one or more predetermined rules select one or more portions of the electronic message as the instant message.

53. The medium of Claim 51, wherein the one or more predetermined rules
5 selectively delete one or more portions of the electronic message to generate the instant message.

54. The medium of claim 42, further comprising a step for storing the electronic message in the storage medium.

10

55. The medium of Claim 42, further comprising a step for determining whether or not to forward the electronic message to the storage medium according to the user preference stored in the database.

15 56. The medium of Claim 42, further comprising a step for forwarding the electronic message to the storage medium when the forwarding to the mail address and the instant message identifier fails.

57. The medium of Claim 55, wherein the user preference stored in the database
20 includes date and time preference of the instant message receiver.

58. The medium of Claim 42, further includes a step for logging the forwarding the electronic message.

25 59. The medium of Claim 42, further includes a step for logging the forwarding the electronic message.

60. The medium of Claim 42, further includes a step for blocking the forwarding of the electronic messages based on a list of telephone numbers.

5 61. The medium of Claim 42, wherein the forwarding is based on the one or more predetermined rules.
